Architecture and interiors, designed with construction in view.

SCALE is an architecture and interior design studio based in Dubai, working on villas, apartments, renovations and commercial interiors in the UAE and internationally.

Architecture and interior are developed as one process. Each project is shaped through proportion, circulation, material and light, then resolved in construction drawings, joinery details and material specification.

Design decisions are made with coordination and execution already in view. Work is documented in a BIM / Revit workflow, so that the intent set at concept reaches the finished space intact.

BASE

Dubai, United Arab Emirates

PRACTICE

Architecture · Interior architecture ·
Technical design

TYPOLOGIES

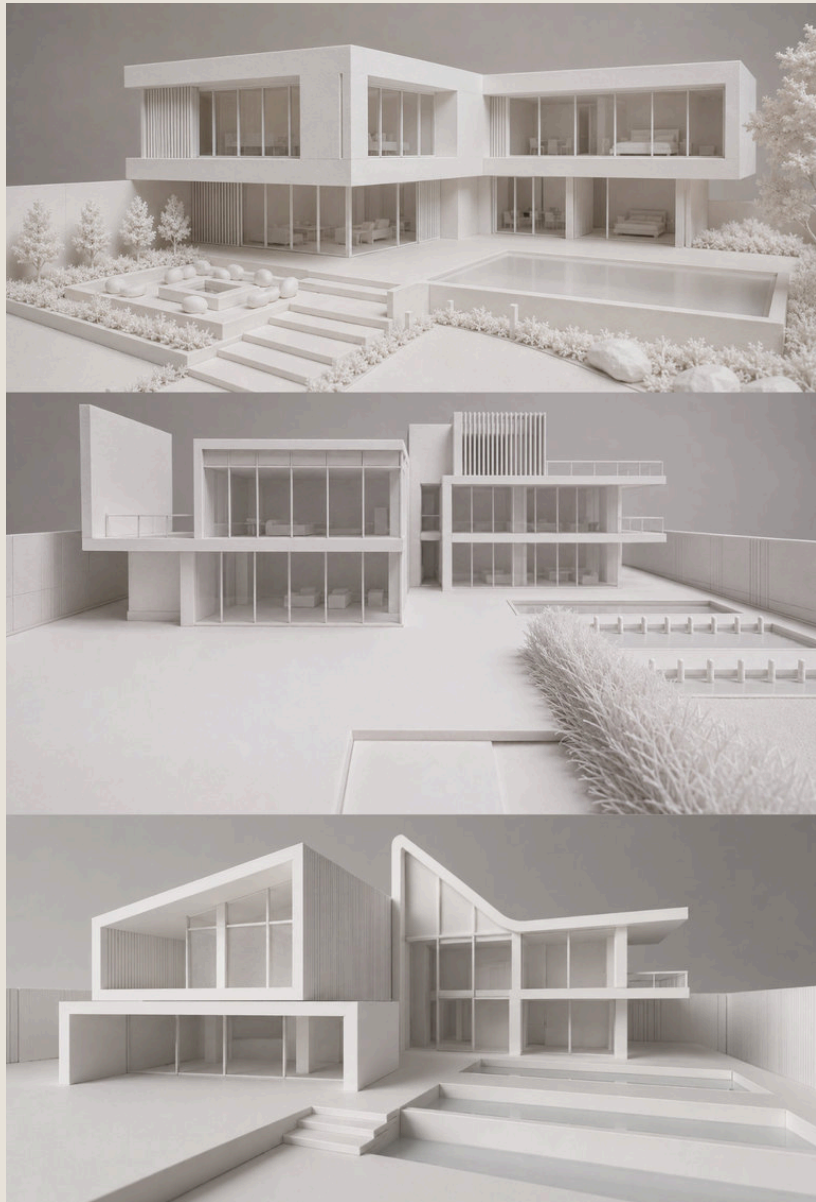

Villas, apartments, renovations, retail and
workplace

WORKFLOW

BIM / Revit, from concept to site

A building should hold its presence once every decorative element is removed. We begin with mass, proportion and light, and add only what the space requires.

01	Clarity	The idea is legible in plan, section and mass.
02	Proportion	Dimension, rhythm and alignment carry the space.
03	Planning	Circulation, storage and services are resolved in the plan.
04	Material	Few materials in each space, each used for what it is.
05	Light	Natural and artificial light designed as part of the architecture.
06	Built as drawn	Junctions, shadow gaps and joinery resolved in the drawings, not on site.

Massing studies. Form and openings tested in white before material is applied.

01 RESIDENTIAL ARCHITECTURE

Palm Jumeirah Duplex Villa

PALM JUMEIRAH, DUBAI

A two-level villa composed of a stone base and a recessed upper volume. The ground floor opens directly onto a pool terrace facing the water; the upper floor is held behind slatted timber screens and planted terraces.

LOCATION	Palm Jumeirah, Dubai
TPOLOGY	Duplex residential villa
AREA	570 m ²
SCOPE	Architecture · Interior · Visualization
YEAR	2026

Pool terrace. The living level opens fully to the water-facing terrace.

Garden façade.

MASSING AND FAÇADE

Stone frames hold recessed glazing on both levels. On the upper floor, slatted timber screens give the private rooms privacy and filter their views; at ground level the frames open completely to the terrace.

Planting is built into the terraces as part of the section, not placed around the house.

Living. Limestone, oak joinery and a continuous line of concealed light at ceiling level.

Stair. Lit treads against a timber-lined wall.

Kitchen. Stone island and flush oak joinery.

Bedroom suite. Stone, oak and bronze-framed glazing.

Dressing room.

Bathroom.

PRIVATE ROOMS

The palette of the living spaces — limestone, oak veneer and bronze — continues unchanged into the private rooms. Wardrobes, bed wall and vanity are built into the architecture, with light concealed in the joinery rather than hung in the room.

02 RESIDENTIAL ARCHITECTURE

Villa Sarbast

SHIRAZ, IRAN

Two asymmetrical volumes with opposing sloped roofs, drawn from the line of the surrounding ridges, are set around an internal courtyard. A narrow glazed hinge joins them and carries the entrance and circulation.

LOCATION	Shiraz, Iran
TPOLOGY	Private villa · Exterior & interior
SCOPE	Architecture · Interior · Visualization
YEAR	2026

TWIN SLOPES

FRAMED LIVING BETWEEN MOUNTAIN AND COURTYARD

Two protective upper frames connected by a transparent central hinge.

MASSING DEVELOPMENT SEQUENCE

01 PRIMARY BARS

Two primary volumes establish the main functional zones.

02 ASYMMETRICAL HIERARCHY

Different dimensions establish a hierarchy between the main and secondary wings.

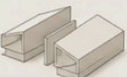

03 CENTRAL SEPARATION

The central hinge forms the entrance, circulation joint and light slot.

04 SLOPED ROOF TRANSFORMATION

Opposing roof planes form an abstract central ridge.

05 LOWER-LEVEL RECESSION

Recessing the lower level produces cantilever, shelter and visual lightness.

06 CARVED FRAMES AND OPENINGS

Carved ends transform the upper masses into inhabitable viewing frames.

ARCHITECTURAL ANALYSIS NOTES

SOLID, VOID & TRANSPARENCY

UPPER & LOWER-LEVEL ORGANISATION

- UPPER LEVEL**
 - Protective framed volumes
 - More enclosed spaces
 - Deep openings
 - Strong silhouette
- CENTRAL ZONE**
 - Entrance
 - Vertical circulation
 - Tall glazed space
 - Spatial connection
- LOWER LEVEL**
 - Transparent communal spaces
 - Recessed facade line
 - Connection to courtyard
 - Visually lighter base

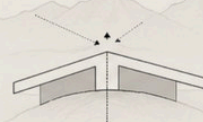

ENTRANCE & CENTRAL HINGE

- Protected entrance threshold
- Vertical circulation and daylight slot
- Visual separation between the two wings

ROOF FORM & MOUNTAIN PROFILE

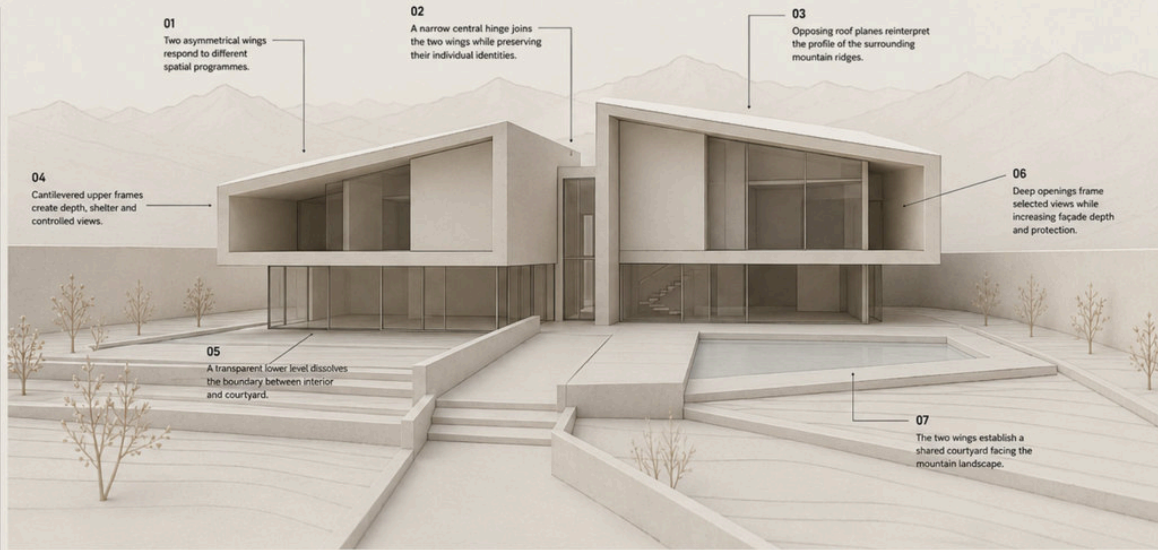

- Opposing roof planes create a shared central ridge.
- Roof geometry directs visual movement toward the centre.
- Form responds to the horizontal rhythm of the mountain ridges.

The villa is organised as two asymmetrical architectural wings connected by a narrow central hinge. Opposing sloped roofs rise toward the centre, forming an abstract ridge inspired by the surrounding mountain landscape. The upper volumes act as deep protective frames, while the recessed and transparent ground floor visually connects the interior with the courtyard, pool and distant views.

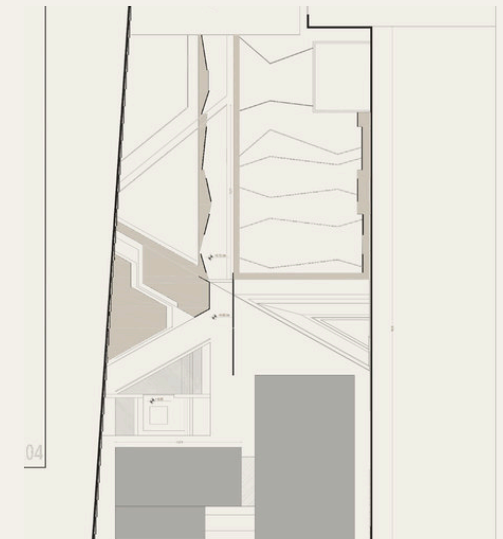

VILLA SARBAST

Sarbast, Fars Province, Iran
Cold Mountain Region
Conceptual Massing Study

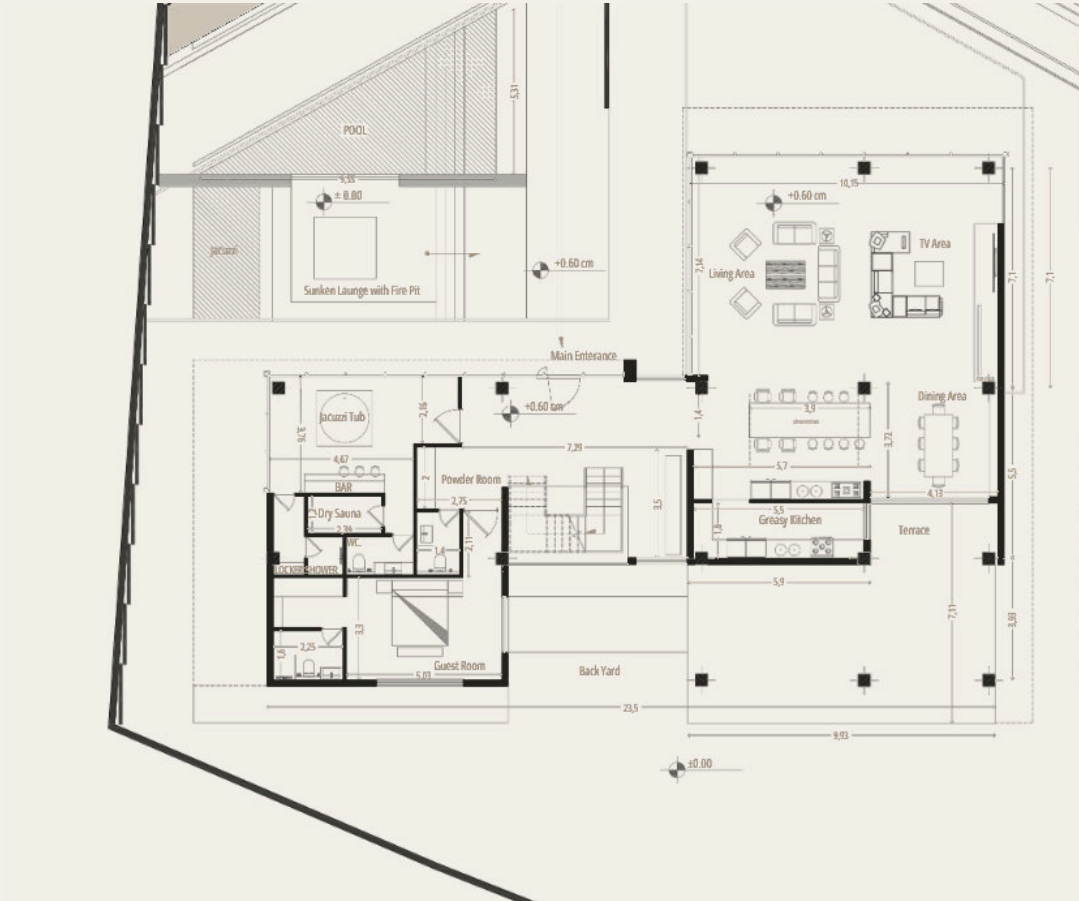

The upper floor is held in two deep frames that shelter the rooms behind them. Below, a recessed, fully glazed ground floor opens the living spaces to the courtyard, the pool and the distant mountains.

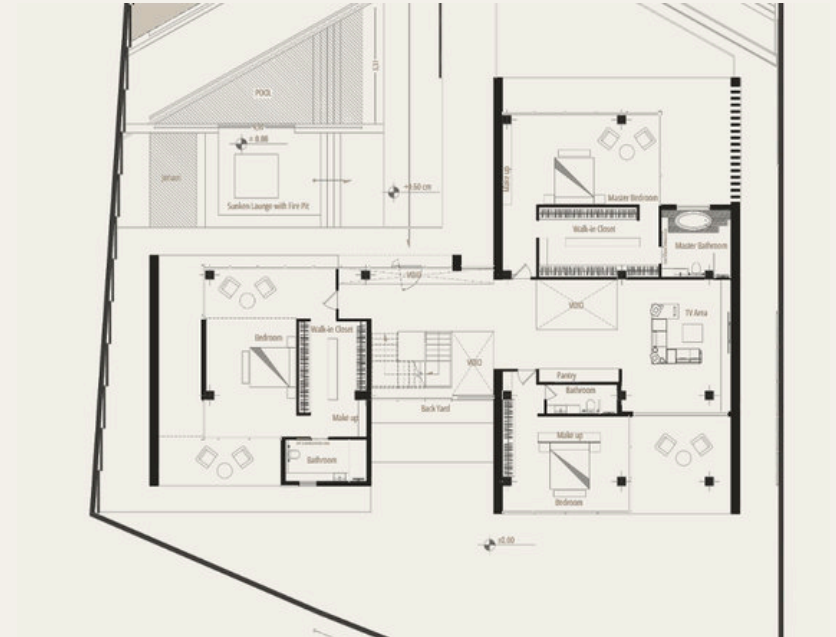

Where the two roofs rise toward the hinge, they read as a single abstract ridge.

Site plan. Plot, terraces and the two wings.

Ground-floor plan. Living, dining and kitchen open to the terrace; pool, jacuzzi and sunken lounge with fire pit on the courtyard side.

First-floor plan. Private rooms held within the two upper frames.

DRAWINGS

The plans were developed in Revit from the massing study. The two wings, the hinge and the courtyard were fixed first; rooms, structure and levels were then coordinated within them.

Drawings graphically cleaned for presentation; geometry and annotation unchanged.

Courtyard façade. The upper volumes frame the glazed hinge; terraces step down to the pool.

Night. The hinge reads as a lit void between the two masses.

LANDSCAPE

The ground steps down in planted terraces and low walls toward the pool, so the house is approached through its own garden.

03 RESIDENTIAL ARCHITECTURE

Private Villa

SHIRAZ, IRAN

Low concrete volumes, full-height glazing and thin metal frames arranged around an infinity-edge pool. The pool organizes the outdoor room and returns the architecture as reflection; gravel, stone and restrained planting keep attention on material and light.

LOCATION	Shiraz, Iran
TPOLOGY	Private villa · Exterior & interior
AREA	180 m ² built · 1,000 m ² plot
SCOPE	Architecture · Interior — concept to execution
YEAR	2024

Aerial view. Pool court, planted courtyard and gravel garden as one composition.

Garden terrace. Glazed volumes open onto a reflecting pool.

ARCHITECTURAL IDEA

The house is planned as a sequence of outdoor rooms — a pool court, a planted courtyard and a gravel garden. Full-height glazing opens each interior to its own exterior space, while solid concrete planes close the house toward the boundaries.

Living. A curved stone wall carries the media niche and a continuous line of light.

Kitchen. Island beneath a rooflight.

Joinery. Stone niche set into flush paneling.

Lounge. Fluted panels and a recessed light line define the room without applied ornament.

Bedroom. Timber, dark glass and indirect light.

MATERIAL AND LIGHT

The interior continues the language of the exterior: few materials, long lines of concealed light, and joinery built into the walls rather than placed against them.

04 RESIDENTIAL ARCHITECTURE

Parsa Villa

SHIRAZ, IRAN

Board-formed concrete volumes. The upper mass steps back and cantilevers over a glazed ground floor, and a perforated screen wall on the upper level filters sun and view.

LOCATION	Shiraz, Iran
TYPOLGY	Private villa · Exterior & landscape
SCOPE	Architecture · Landscape · Visualization
YEAR	2026

Street view. The upper mass cantilevers over the glazed ground floor.

Night. The concrete shell against warm interior light.

LANDSCAPE

The front terrace is raised above a dry garden of agave, cactus and gravel. The garden holds the house back from the street and separates the living spaces from the approach.

05 RESIDENTIAL ARCHITECTURE

Niknam Villa

FARS PROVINCE, IRAN

A single-story villa in hand-laid brick. Deep-set openings frame the garden and filter daylight into the rooms.

LOCATION	Fars Province, Iran
TPOLOGY	Private villa · Exterior & landscape
SCOPE	Architecture · Landscape · Visualization
YEAR	2025

Entrance court. Alternating strips of brick and stone paving, softened by planting.

Low walls, olive trees and grasses tie the house to its terrain. A sunken fire pit sets the gathering point between house and garden.

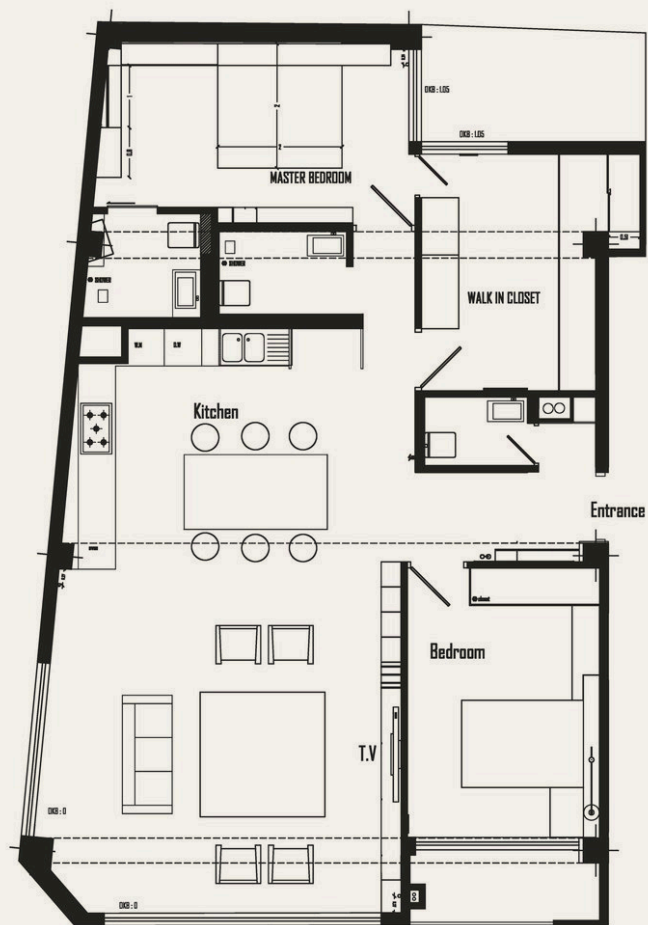

06 INTERIOR ARCHITECTURE

Dubai Marina Apartment

DUBAI MARINA, DUBAI

An apartment organized around one open living and kitchen zone. A white envelope is set against matte black surfaces, fluted paneling and warm wood.

LOCATION	Dubai Marina, Dubai
TPOLOGY	Apartment interior
SCOPE	Interior architecture · Visualization
YEAR	2026

Floor plan.

Kitchen. Tall joinery wall, stone-topped island and bar seating.

LAYOUT

Kitchen, dining and living share one open zone along the façade. The master suite with walk-in closet and the second bedroom sit at either end of the plan, separated from the living space by storage and service walls.

Entry. A round mirror set into fluted joinery; the door concealed in the wall.

Master bedroom. Bed wall and mirror as one joinery piece.

JOINERY

Storage is concealed and joinery is built into the walls, so the rooms carry few loose pieces. Recessed linear light follows the joinery lines.

07 COMMERCIAL / RETAIL

Dousideh Boutique

DUBAI

A compact fashion boutique set out as a rhythm of dark timber fins and white display planes, leading from the shopfront to a feature stair.

LOCATION	Dubai
TPOLOGY	Fashion boutique interior
SCOPE	Interior design · Joinery · Visualization
YEAR	2026

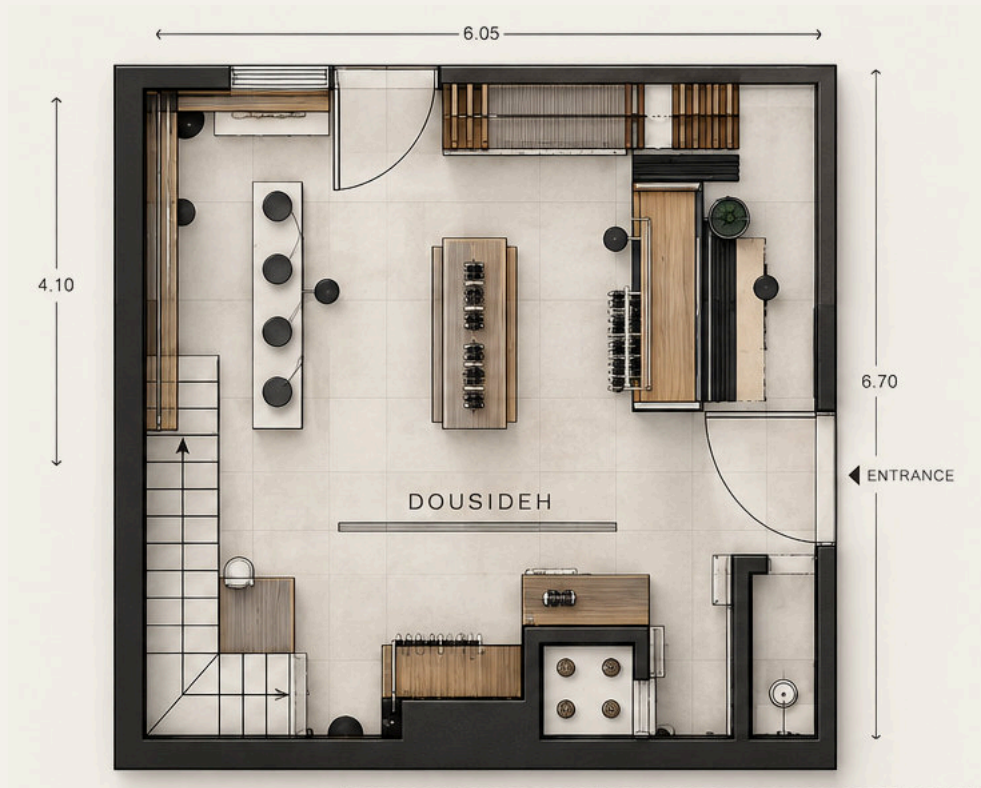

Sales floor. Timber fins, a white display plane and the stair beyond.

Counter. A faceted white volume beneath floating timber shelving.

CIRCULATION

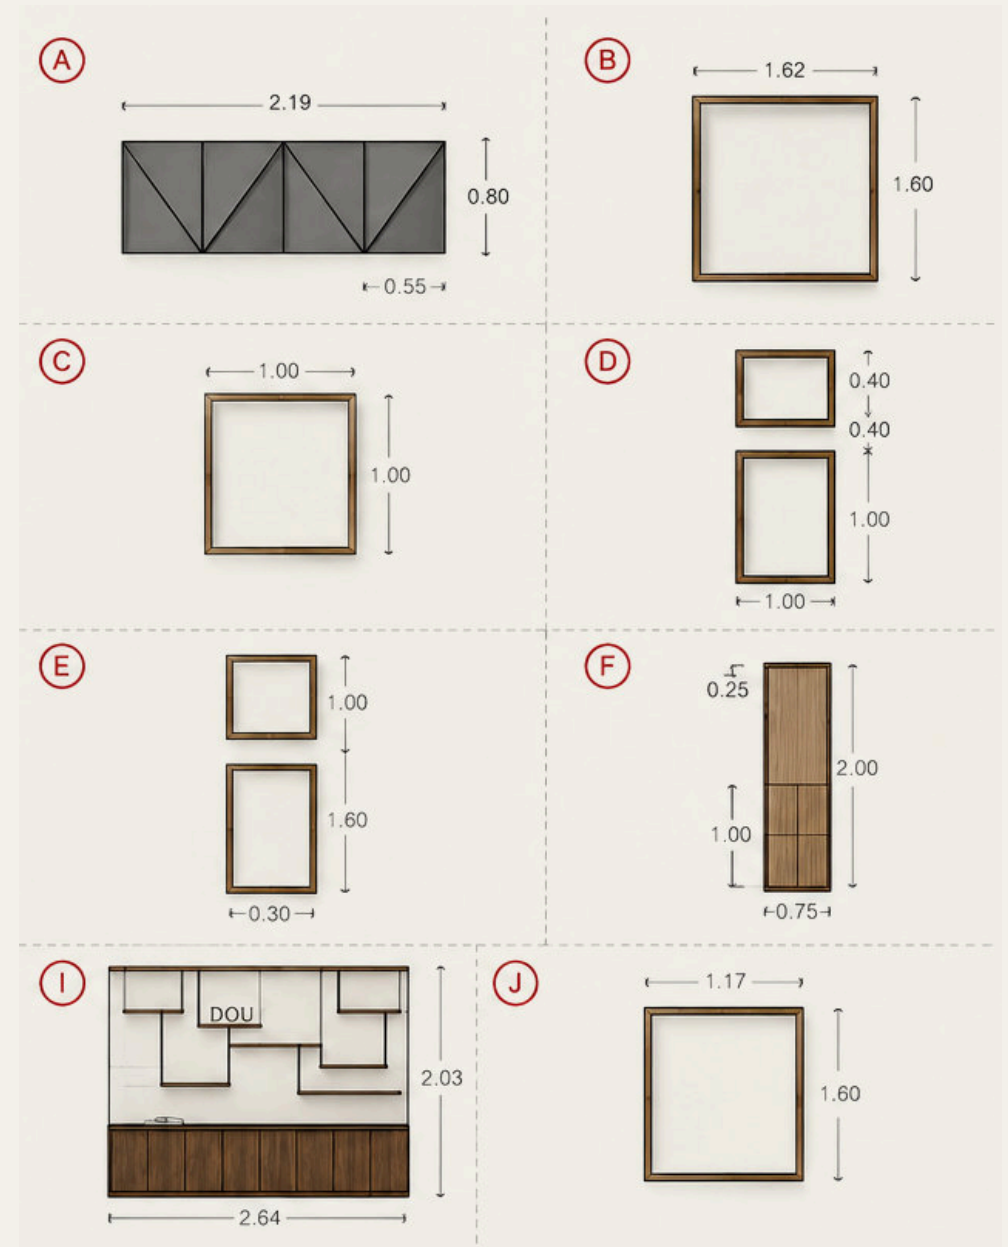

The fins set a rhythm from the shopfront into the shop and screen the stair without closing it. Display, counter and stair are placed as one sequence rather than as separate pieces of furniture.

Key plan. Display tables, wall joinery, counter and stair.

TECHNICAL JOINERY

Each joinery element — counter, display frames and wall units — is drawn, keyed to the plan and dimensioned, so that fabrication follows the drawing rather than decisions made on site.

Joinery elevations. Keyed to the plan and dimensioned for fabrication.

08 COMMERCIAL / RETAIL

O'Munt Store

SHIRAZ, IRAN

A two-level fashion store whose shopfront reads as a lit volume on the street at night. Inside, a floating stair links the retail floor to a mezzanine.

LOCATION	Shiraz, Iran
TPOLOGY	Fashion retail · Exterior & interior
SCOPE	Architecture · Interior · Visualization
YEAR	2019

Reception. A sculpted desk on axis, framed by steel garment rails and stone plinths.

SPATIAL SEQUENCE

The ground floor reads as one continuous room. Garment rails and plinths set out the route from the shopfront to the reception desk, with fitting rooms and stair placed behind it.

Retail floor. Track lighting keeps the focus on the product.

Fitting rooms. Arched openings in soft grey.

Stair and mezzanine. A floating stair links the retail floor to the upper level.

Display niche. Light lines at floor and shelf edge.

MATERIALS

Black steel, stone, white plaster and charcoal walls form a restrained background. Color is left to the garments, a few pieces of loose furniture and the deep red of the fitting-room curtains.

09 WORKPLACE

ALO Turkey Office

SKYLAND TOWER, ISTANBUL

An office planned around a central meeting table, with a glazed meeting room and private offices along the tower façade. Dark exposed ceilings and linear light are set against pale plaster, oak and timber slats.

LOCATION	Skyland Tower, Istanbul, Turkey
TPOLOGY	Real estate office interior
SCOPE	Interior architecture · Visualization
YEAR	2026

Meeting area. Frameless glass gives each room privacy without closing the plan.

GLASS AND LIGHT

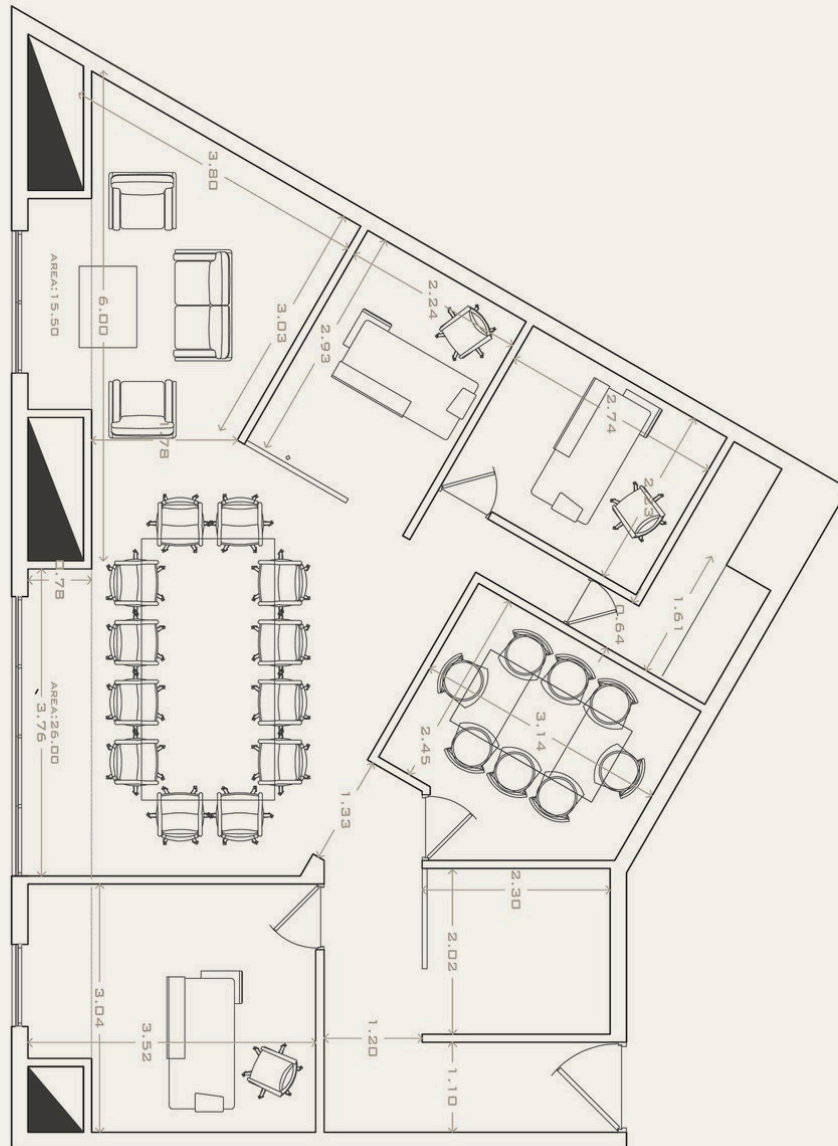

Frameless glass encloses the meeting room and private offices, so the central table keeps its view of the skyline. The scheme was studied in daylight, at dusk and at night to balance linear ceiling light, warm timber and the city outside.

Main workspace, daylight.

Main workspace, night.

Floor plan. Meeting table, workstations and room widths, dimensioned.

Glazed meeting room. Oak floor, pale plaster and the exposed ceiling.

FLOOR PLAN

The central table occupies the widest part of the floor. The glazed meeting room and private offices follow the angled façade, and dimensions are fixed for each room and furniture zone.

One studio from design through delivery.

Architecture, interiors and technical design are handled by the same team, so decisions made at concept are carried through the drawings to site.

01	02	03	04	05
Architecture	Interior architecture	Technical design	Visualization	Project delivery
Concept development	Residential interiors	Construction documentation	Interior & exterior renders	Material selection
Architectural design	Commercial interiors	Detailed drawings	Rendered floor plans	FF&E selection
Renovation	Workplace design	Joinery design	Design presentation	Design coordination
Space planning	Retail design	Ceiling & lighting design		Contractor coordination
Design development	Hospitality design	MEP coordination		Site supervision
Façade design		BIM / Revit documentation		

From brief to handover, one continuous line.

Design

Brief, site and idea resolved into space.

- 01 Brief
- 02 Research & site analysis
- 03 Concept
- 04 Spatial design
- 05 Design development

Resolve

The design made buildable in drawings.

- 06 Materials & technical coordination
- 07 Construction documentation

Build

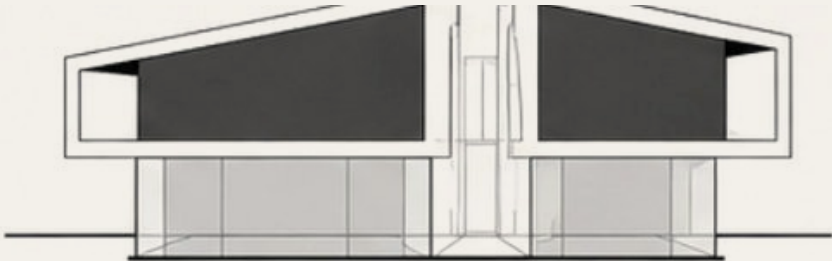

Design intent held on site.

- 08 Site supervision
- 09 Handover

Designed to be built.

SCALE develops projects beyond concept imagery. Design is resolved in BIM / Revit documentation, construction drawings, joinery details and coordinated ceiling, lighting and MEP layouts, so the built result holds the geometry, materials and light set at concept.

Shadow gaps, junctions and joinery are detailed in the drawings, and the same team follows the work on site.

Villa Sarbast, section. Solid, void and transparency — upper frames over a glazed lower level.

DRAWINGS IN THIS PORTFOLIO

Massing and section study	Villa Sarbast	10
Plans developed in Revit	Villa Sarbast	11
Apartment plan with joinery	Dubai Marina Apartment	22
Joinery elevations for fabrication	Dousideh Boutique	26
Dimensioned office plan	ALO Turkey Office	32

Resolved at the junction.

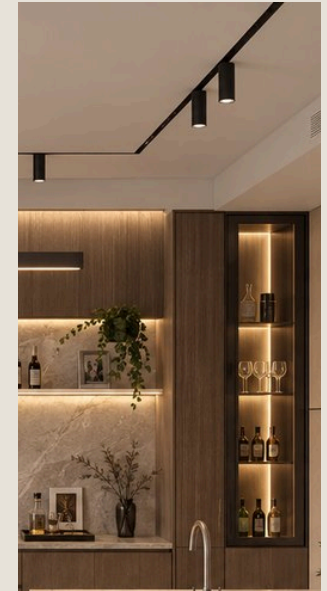

Quality is decided where materials meet: a shadow gap between wall and ceiling, a flush joinery panel, a concealed light line, a stone edge. These conditions are drawn and coordinated before work starts on site.

Display joinery with integrated light. Palm Jumeirah Duplex Villa.

Stone, niche light, backlit mirror. Palm Jumeirah.

Concealed shelf light. Palm Jumeirah.

Floor light line at the wall base. O'Munt Store.

Design and delivery, led directly by the founders.

SCALE was co-founded by Shahin Khosravi and Farnam Saremi. Both keep direct architectural oversight on every project, from concept and spatial planning through documentation, material coordination and site.

Shahin Khosravi

CO-FOUNDER — ARCHITECT & INTERIOR DESIGNER

Over twelve years of experience across architecture, interior design, technical documentation, visualization and site coordination. Shahin develops projects from concept design through construction drawings, material coordination and site support, with a focus on translating design intent into buildable detail.

Farnam Saremi

CO-FOUNDER — ARCHITECT & INTERIOR DESIGNER

Co-leads the studio's design and delivery, working across spatial planning, material and joinery detailing and project coordination — holding the same commitment to controlled proportion, calm material palettes and construction-conscious design.
